

FOR IMMEDIATE RELEASE

Process Technology Completes Acquisition of Dynatronix, Inc.

MENTOR, OH, Feb. 12, 2018 - Process Technology, a global leading manufacturer of thermal solutions for surface finishing, high-purity, and aquaculture applications, is excited to announce that it has completed the acquisition of Dynatronix, Inc. "Our acquisition of Dynatronix complements our product offerings within our core industries. Dynatronix's high-end portfolio of DC, pulse and reverse power supplies fits well with our market strategy," stated Jody Richards, President of Process Technology. "This acquisition also demonstrates our commitment to delivering quality and value to our customers in the surface finishing and high purity markets by offering a high quality, made in America product line."

Founded in 1971 and based in Amery, WI, Dynatronix is a leading manufacturer of DC, pulse and pulse reverse power supplies for the surface finishing and semiconductor industries. "We are excited! We view this acquisition as an opportunity to strengthen the competitive position of both companies within the markets we serve. Additionally, our ability to join forces and share technologies will help us to continue to offer products that exceed our customers' expectations for quality and reliability," said David Osero, VP of Sales and Marketing for Dynatronix. "We feel that we are handing over the reins of Dynatronix to company with the same core values that have allowed us to be successful these past 47 years," added Osero. Dynatronix will continue to operate at the facility in Wisconsin.
